Vehicle Dynamics & ADAS Mobility Event 3rd Edition

ABOUT CONFERENCE

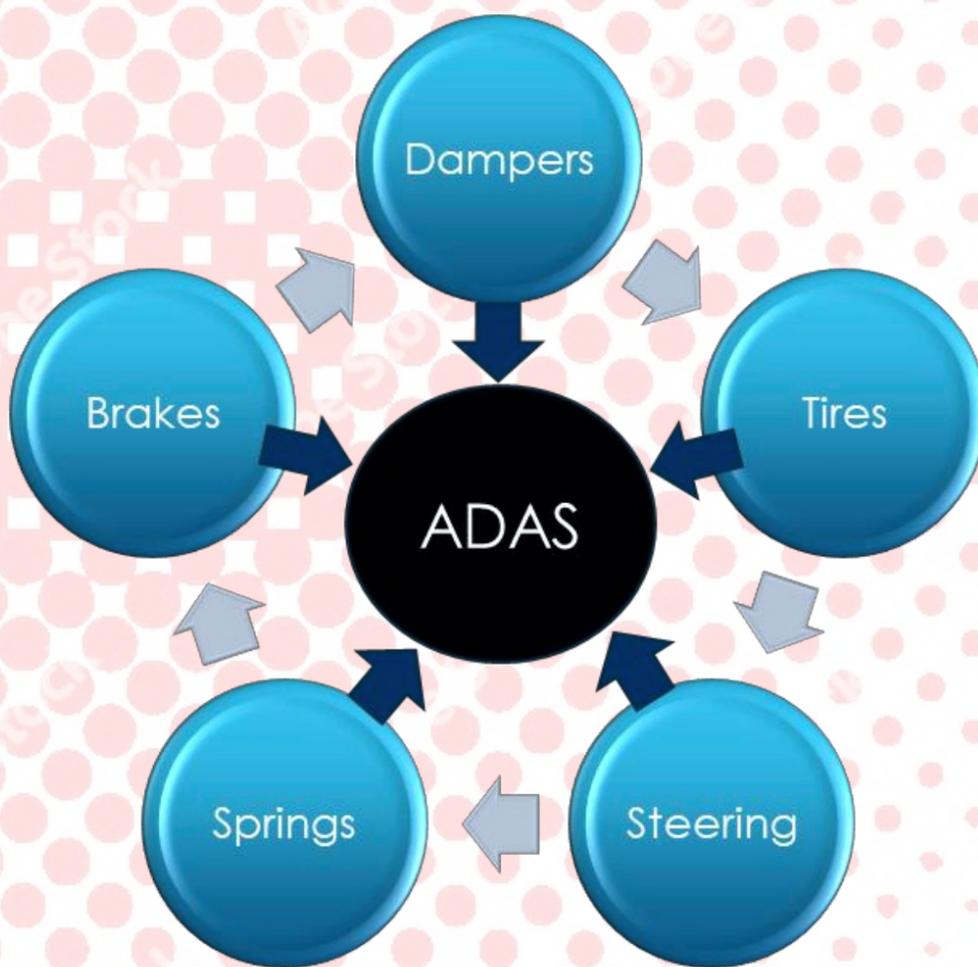

Automobile industry is striving towards providing better customer experience and improving driving safety.

Increasing awareness and expectations from customers are pushing the auto industry to move from conventional way towards adoption of Advanced Driver Assist Systems (ADAS).

This new era of ADAS requires integration and cooperation with components which control the basic vehicle dynamic characteristics.

Taking forward the legacy of past 2 successful editions,

MIC creates an open platform to help industry address the technical, regulatory and customer ramifications of moving from driver in the loop to Advanced driver assist/Autonomous vehicles that can change the course of vehicle design, validation, and certification.

Vehicle Dynamics & ADAS Mobility Event 3rd Edition

ABOUT CONFERENCE

Physical demonstration on test track

Practical technology demonstration on track is an excellent way to showcase the capabilities of various automotive systems. During the demonstration, attendees will have the opportunity to witness ADAS validation, Vehicle Handling and ESP, Suspension, Steering System, and Braking performance in action.

Vehicle Handling Test

ESP Testing

AEB (CCRs, CCRm)

AEB Pedestrian

AEB Cyclist

LDW/LKA Test

Who Should Attend

- Senior Management from OEMs, Component Manufacturers, Technology Partners.
- Testing / Certification Agencies.
- Scientists and Researchers.
- Academia
